DIGITAL PRINT FINISHING SOLUTIONS

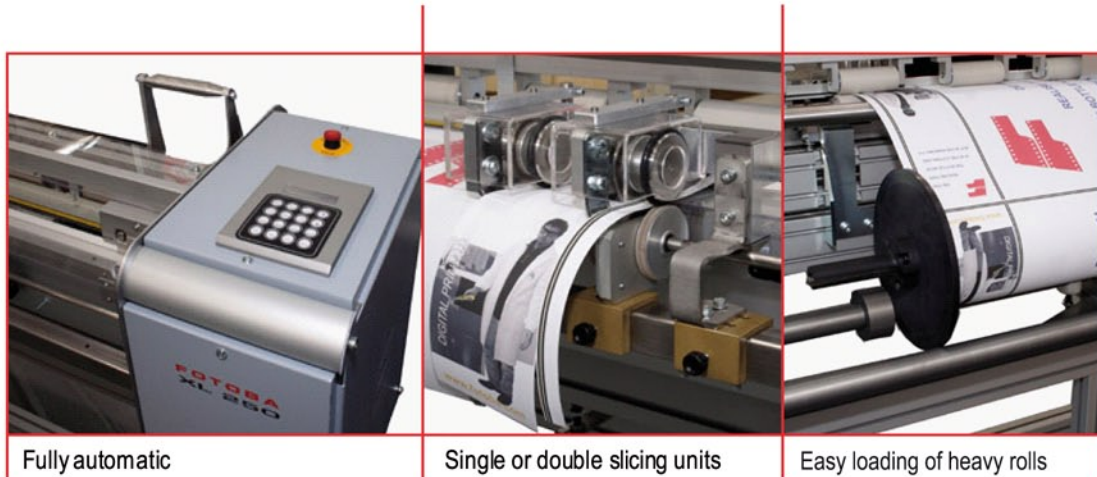

XL250/320

X/Y Automatic Super Wide Roll Cutters
(Patents Pending)

XL250/320 X/Y Automatic Super Wide Roll Cutters (patent pending) are the solution for the finishing of multiple images printed on wide or super wide webs.

XL250/320 use the **FOTOPA CUT MARKS** to cut perfectly on the image side and can correct web tracking errors made by the printers. Even if the prints are not parallel to the web edge, or the roll is not wound straight, the cutter will follow the image without any mistakes.

Fully automatic

Single or double slicing units

Easy loading of heavy rolls

Characteristics:*

- | | |
|--|---|
| - Self squaring cut on image sides. | - Memory channels to store different cut marks. |
| - Web/image tracking automatic control. | - All mechanism controlled by stepper motors |
| - Max linear speed 18m/min. | - Automatic scanning of the cut marks |
| - Double cut (8mm) slicing units available. | - Self sharpening blade system. |
| - Programmable length and quantity to convert media. | - Accuracy ± 1 mm (0,04 in.) |

These cutters can handle numerous types of media with a maximum thickness of 0.8mm (32ml) including Polycarbonates, Laminated and Encapsulated media, Photo paper, Vinyl, Banner, Sticky Back Vinyl, PVC, Inkjet and Electrostatic Plotters media, Graphic Art Film, Duratrans and much more.
